

Enabling Amazon S3 for document storage

1. Enable Amazon S3 configuration in the community-app at

- > "Admin"
- > "System"
- > "Configurations"
- > Click "Enable" button for the "amazon-s3" configuration

2. Provide your Amazon S3 external service connection details at

- > "Admin"
- > "System"
- > "External Services"
- > "External Services - S3 Amazon Service Configuration"
- > Click "Edit" button
- > Update **all** values of s3_access_key, s3_secret_key, and s3_bucket_name
- > Click "Submit" button

- Note: For info of where to find your Amazon S3 access key and secret key see <https://xfilespro.com/accesskeys3/>.
- Note: Amazon S3 has **strict** requirements for bucket names. Bucket names must have no capital letters and no underscores. For a list of all naming requirements see <https://docs.aws.amazon.com/AmazonS3/latest/dev/BucketRestrictions.html>.
