

TestingBeforeRelease

Testing before a release

This is a rough draft - Use this page to collect test plans and ideas.

Of course, ideally we should be able to say

```
./build.sh test
```

and have everything tested automatically, but it is not the case yet.

Automated tests

(please complete this)

Functional tests

Test all samples.

Licensing checks

(Easier said than done - I know 😞)

The legal directory must be up to date.

All source files must contain the ASF 2.0 license, see [bug 27467](#)
