Ipv6Resolver

IPV6 Resolver Issue

I get warnings in the syslog from spamd about '`Bad arg length for Socket::pack_sockaddr_in, length is 0, should be 4`', like so:

```
[50765] dbg: dns: is Net::DNS::Resolver available? yes
[50765] dbg: dns: Net::DNS version: 0.51
[50765] warn: Use of uninitialized value in subroutine entry
  at /usr/local/lib/perl5/5.8.6/mach/Socket.pm line 373.
  Bad arg length for Socket::pack_sockaddr_in, length is 0,
  should be 4
  at /usr/local/lib/perl5/5.8.6/mach/Socket.pm line 373.
```

This is caused by a bug in using IPv6 addresses in /etc/resolv.conf. See https://issues.apache.org/SpamAssassin/show_bug.cgi?id=4412 for more info on this. Fixed in trunk in 2005.
