

RsyncAccounts

Rsync Accounts

These are used to upload logs for the release rescoring run as described in [RescoreMassCheck](#).

http://svn.apache.org/repos/asf/spamassassin/trunk/masses/CORPUS_SUBMIT has information about how to request an account and get setup.

You also need a copy of the **rsync** tool. Most Linux distributions include this. Alternatively, pick it up at <http://www.rsync.org/> .

Administrivia

The server-side (adding accounts etc.) is discussed at [RsyncConfig](#).
