

LocalSolr

This page describes an obsolete project.

See [SpatialSearch](#) for the Solr geographic data project.

Intro

[LocalSolr](#) is Solr's facility for incorporating geo-spatial search into Solr. It is built on top of [Local Lucene](#) which was contributed to Lucene by AOL.

The main documentation for this extension is at this URL: <http://www.gissearch.com/localsolr> At some point that information should fold into this page.
