

ReleaseNote32

June 2011, Apache Solr 3.2™ available

The Lucene PMC is pleased to announce the release of Apache Solr 3.2.

Solr is the popular, blazing fast open source enterprise search platform from the Apache Lucene project. Its major features include powerful full-text search, hit highlighting, faceted search, dynamic clustering, database integration, rich document (e.g., Word, PDF) handling, and geospatial search. Solr is highly scalable, providing distributed search and index replication, and it powers the search and navigation features of many of the world's largest internet sites.

This release contains numerous bug fixes, optimizations, and improvements, some of which are highlighted below. The release is available for immediate download at:

<http://www.apache.org/dyn/closer.cgi/lucene/solr> (see note below).

See the CHANGES.txt file included with the release for a full list of details as well as instructions on upgrading.

Solr 3.2 Release Highlights

- * Ability to specify overwrite and commitWithin as request parameters when using the JSON update format.
- * TermQParserPlugin, useful when generating filter queries from terms returned from field faceting or the terms component.
- * DebugComponent now supports using a NamedList to model Explanation objects in its responses instead of Explanation.toString.
- * Improvements to the UIMA and Carrot2 integrations
- * Highlighting performance improvements
- * A test-framework jar for easy testing of Solr extensions.
- * Bugfixes and improvements from Apache Lucene 3.2

Note: The Apache Software Foundation uses an extensive mirroring network for distributing releases. It is possible that the mirror you are using may not have replicated the release yet. If that is the case, please try another mirror. This also goes for Maven access.
