Your action is null.  
So your form will not process.  
Edit struts-config.

Or, moving to a slightly less elevated form.

```
There once was a form validation.
That wasn't invoked, consternation!

Keyed on form as intended.
But the formset was the action variation.

```
I once knew a man good with css files
His struts-config went on for miles
Then Cedric came along
With a book and a song
Now he does everything with Tiles.
