

BoardReport-February2010

Feb 2010 Board Report

Status

Velocity continues to be quiet and steady. Traffic on the dev list continues to be light (and is mostly reflecting bug tracker activity). User list traffic also is light but steady.

The Velocity project currently has no board-level issues at this time.

Community changes

Velocity did not add or remove any new committers or PMC members since the last board report.

Velocity Engine project

Velocity Engine 1.6.3 was released on Dec. 16th, 2009.

Light activity on the bug tracker, new bugs are addressed and closed, the overall rate of bug reports is pretty low (Velocity is, after all, pretty mature software). 9 Bugs were opened after Dec 1st., 18 were resolved or closed in various states (mostly fixed).

Velocity Tools project

The tools project had no releases since the last board report. Discussion about a 2.0 release has been started but not yet concluded.

Other Velocity Sub projects

There was no activity in the other velocity sub-projects.
