Apache Cassandra Wiki

{{{#wiki red/solid Most of the information in this Wiki is being deprecated!

The official Cassandra documentation is located [here](#). Cassandra is moving away from this wiki for user-facing documentation in favor of in-tree docs. Patches to the official in-tree documentation are welcome and [can be submitted via a GitHub Pull Request](#).

This wiki is intended instead to document Cassandra internals and how to edit them and thus contains developer-focused information. If you really need access to this wiki, please send an email to the mailing list dev@cassandra.apache.org with your wiki username and we will add you.

}}}

Cassandra is a highly scalable, eventually consistent, distributed, structured key-value store. Cassandra brings together the distributed systems technologies from [Dynamo](#) and the log-structured storage engine from Google's [BigTable](#).

General Information

- [Official Apache Cassandra Website](#) (download, bug-tracking, mailing-lists, etc)
- [Official Cassandra Documentation](#)

Developer Documentation

- [Architecture Internals](#)
- [Top Level Packages](#)
- [CLI Design](#)
- [How To Release](#) (Note: currently a work in progress) (Note: only relevant to Cassandra Committers)
- [WindowsDevelopment](#)
- [Logging Guidelines](#)

Deprecated Developer Documentation

- [How To Build](#) (Deprecated by [Building and IDE Integration](#))
- [How to Debug in Eclipse](#) (Deprecated by [Eclipse IDE Setup](#))
- [How To Contribute](#) (Deprecated by [Contributing Code Changes](#))
- [How To Review](#) (Deprecated by [Review Checklist](#))
- [How To Commit](#) (Deprecated by [How To Commit](#))

Other Languages

- [SimpleChinese](#)
- [Japanese](#)
- [BrazilianPortuguese](#) [Português do Brasil](#)
- [Italian](#) [Italiano](#)
