Can I change theme on a per-page basis

The default theme is passed to the page through a `theme` variable. To change the theme for a page, use the `set` tag to change the `theme` variable. The variable can be changed using a static value or property.

Static Value

Change to the "simple" theme.

```
<s:set name="theme" value="'simple'" scope="page" />
```

Property

Change to the theme name indicated by the `myTheme` property.

```
<s:set name="theme" value="%{myTheme}" scope="page" />
```
