

Plugins stack

The Plugins stack comprises of components (applications) that extend the base applications of Apache OFBiz.

Components in this stack are loaded on start-up after components in the [Base Applications stack](#), in the order as outlined [here](#).

- [Components](#)

Components

Name	Description	Wiki link	
assetmaint	<ul style="list-style-type: none">• Asset Management• IS Management	Asset Management	
bi	<ul style="list-style-type: none">• Business Intelligence integration	Business Intelligence
