

Add new HTTP listener

[← Add new AJP listener](#)

[↑ Adding new listeners for the Web containers](#)

[Add new HTTPS listener →](#)

To add a new HTTP listener click on the respective link. The following figure illustrates the different parameters needed for creating a new HTTP listener. This process is very simple and the parameters are self explanatory, fill in with your values and click on **Save**.

Network Listeners[help](#) [view](#)

Add new HTTP listener for Jetty

Unique Name:

A name that is different than the name for any other web connectors in the server

Host:

The host name or IP to bind to. The normal values are 0.0.0.0 (all interfaces) or localhost (local connections only)

Port:

The network port to bind to.

Min Threads:

10

The minimum number of threads this connector should use to handle incoming requests

Max Threads:

50

The maximum number of threads this connector should use to handle incoming requests
