2022-09-14 Apache VCL Board Report

Description:
The mission of the Apache VCL project is to create and maintain of software related to a modular cloud computing platform which dynamically provisions and brokers remote access to compute resources.

Issues:
There are no issues requiring board attention.

Membership Data:
Apache VCL was founded 2012-06-19 (10 years ago)
There are currently 10 committers and 8 PMC members in this project.
The Committer-to-PMC ratio is 5:4.

Community changes, past quarter:
- No new PMC members. Last addition was Mike Jennings on 2020-08-24.
- No new committers. Last addition was Mike Jennings on 2019-01-04.

Project Activity:
- Last release: 2019-07-25
- Use of VCL and involvement in the VCL community has dropped to pretty small numbers over the last few years. There are still people using it. The few committers left have not had much time to put toward getting another release out, which is why it has now been over 3 years. We realize that is a really long time. We do want to get a newer release out, and have some specific things we'd like included in it, but making the time to get it done has been difficult.

Community Health:
Nothing has changed here - VCL continues to be a small but functioning community. We still have committers, PMC members, and users.
