

# sling-Folder

## sling:Folder

A replacement for `nt:folder` which allows for unstructured content.

### Definition

```
[sling:Folder] > nt:folder
- * (undefined) multiple
- * (undefined)
+ * (nt:base) = sling:Folder version
```

### Description

This node type is preferable to `nt:unstructured` because it can be used as a child of an `nt:folder` node and will, by default, be made available via WebDAV.
