

# Tapestry 5.2.4 beta release

Following a successful vote, the Tapestry team has released the latest (and likely, final) beta release of Tapestry 5.2, version 5.2.4.

This release consists of a modest number of bug fixes to 5.2.2, along with a few non-disruptive last minute improvements. Full [release notes](#) are available.

It is expected that Tapestry 5.2.4 will be voted as the stable 5.2 release in a few weeks time, barring any serious bugs being discovered in the meantime.

Tapestry can be [downloaded](#) from the Apache Mirrors, or via the central Maven repository:

```
<dependency>
<groupId>org.apache.tapestry</groupId>
<artifactId>tapestry-core</artifactId>
<version>5.2.4</version>
</dependency>
```

Tapestry 5.2.3 was not released due to a problem with the Maven quickstart archetype, which was corrected in 5.2.4.
