 - Frontend errors
 - Backend errors
 - Internal errors
- Error codes
- Error message
- Requirement on UDF authors
 - Warning Codes
- Additional command line switches
- · Compendium of error messages
- References

This document describes the functional specification for the Error Handling feature in Pig.

Error types and mechanism to handle errors

The #cookbook discusses the classification of errors within Pig and proposes a guideline for exceptions that are to be used by developers. A reclassification of the errors is presented below.

Frontend errors

. The front-end consists of multiple components - parser, type checker, optimizer, translators, etc. These errors usually occur at the client side before the execution begins in Hadoop. All the errors from these components can be categorized as front-end errors. Components that are part of the front end will throw specific exceptions that capture the context. For example, the parser throws a `ParseException`, the type checker will throw a `TypeCheckerException`, the optimizer will throw a `LogicalOptimizerException`, etc. A list of the exceptions thrown in the front-end are as follows.

- `FrontendException` Generic front-end exception
- `JobCreationException` Used for indicating errors during Map Reduce job creation
- LogicalToPhysicalTranslatorException` Used for indicating errors during logical plan to physical plan translation
- `MRCompilerException` Used for indicating errors during map reduce plan compilation from physical plan
- OptimizerException` Used for indicating errors during logical plan optimization
- `PigException` Generic exception in Pig
- `PlanException` Used for indicating errors during plan/graph operations
- PlanValidationException` Used for indicating errors during plan validation
- `SchemaMergeException` Used for indicating errors during schema merges
- `TypeCheckerException` Used for indicating errors due to type checking
- VisitorException` Used for indicating errors when visiting a plan

Backend errors

. The execution pipeline, the operators that form the pipeline and the map reduce classes fall into the back-end. The errors that occur in the back-end are generally at run-time. Exceptions such as `ExecException` and `RunTimeException` fall into this category. These errors will be propagated to the user facing system and an appropriate error message indicating the source of the error will be displayed.

Internal errors

. Any error that is not reported via an explicit exception is indicative of a bug in the system. Such errors are flagged as internal errors and will be reported as possible bugs. Any non Hadoop backend error is a bug in Pig.

While the aforementioned errors describe a developer's viewpoint of errors, the user is interested in the source of the errors. A classification of the source of errors is given below.

- 1. User Input Sources of user input error are syntax error, semantic error, etc.
- 2. Bug An internal error in the Pig code and not related to the user's input
- 3. User Environment The client side environment
- 4. Remote Environment The Hadoop execution environment

Error codes

Error codes are categorized into ranges depending on the nature of the error. The following table indicates the ranges for the error types in Pig. Normally, errors due to user input and bugs in the software are not retriable. Errors due to the user environment and remote environment may be retriable based on the context. Error codes will be used for documentation to help users address common errors.

Error type	Range
User Input	1000 - 1999

Bug	2000 - 2999
User Environment (retriable)	3000 - 3999
User Environment	4000 - 4999
Remote Environment (retriable)	5000 - 5999
Remote Environment	6000 - 6999

Programmatic access via Java APIs can query if exceptions are retriable or not. For external processes that rely on the return code of the process, the table given below will indicate the status of the process execution. Front-end exceptions will result in failures as far the user is concerned. Hadoop's errors are not retriable and return fatal error code (2) or partial failure code (3).

Status	Return Code
Successful Execution	0
Retriable error	1
Fatal error	2
Partial failure	3

Error message

The format of the error message shown to the user will be as follows:

ERROR <Error code>: <Error message>

E.g.: ERROR 1005: The arity of the group by columns do not match.

Requirement on UDF authors

In order to enable warning message aggregation, UDF authors should use Pig's abstraction to handle warning message aggregation. For more details refer to the [#design].

attachment:PigLogger.jpg

Warning Codes

Each warning message will be associated with a warning code. The warning code will correspond to the enum type used for the warning message aggregation.

Note

1. The exact warning codes along with the warning messages are to be decided.

Additional command line switches

In order to support the ability to turn on/off warning message aggregation, log error messages to client side logs and specify the location of the client side log, the following switches will be added to and/or extended in Pig.

- 1. -wagg to turn on warning aggregation; by default warning aggregation is turned off.
- 2. -v to include printing error messages on screen; by default error messages will be written to client side log. Using -v will also print the messages on the screen
- 3. <<Anchor(clientSideLog)>>-I directory where the client side log is stored; by default, logs will be stored in the current working directory and named pig_<datestamp>.log. When used in batch mode (i.e., when a script to be executed is provided), the log file name will also contain the name of the script pig <datestam> <pig file>.log.

Compendium of error messages

A list of possible error messages is listed below. This list is not comprehensive and will be modified to reflect the true error message along with the error code.

Error Message
Error during parsing
Unable to descirbe schema for alias <alias></alias>
Unable to store alias <id></id>
Unable to find an operator for alias <alias></alias>
No alias <alias> to <operation></operation></alias>
No plan for <alias> to <operation></operation></alias>
Could not find operator in plan
Found duplicates in schema. < list of duplicate column names> . Please alias the columns with unique names.
Expected a bag with a single element of type tuple but got a bag schema with multiple elements
Expected a bag with a single element of type tuple but got an element of type <type></type>
getAtomicGroupByType is used only when dealing with atomic <group join=""> col</group>
getTupleGroupBySchema is used only when dealing with <tuple join=""> group col</tuple>
Each <cogroup join=""> input has to have the same number of inner plans</cogroup>
attributes can either be star 📩 or a list of expressions, but not both.
Problem with input <operator> of User-defined function: <function></function></operator>
Error determining fieldschema of constant: <constant></constant>
Problems in merging user defined schema
Schema mismatch. A basic type on flattening cannot have more than one column. User defined schema: <schema></schema>
Problem determining schema during load
Unable to merge schemas
Only a BAG or TUPLE can have schemas. Got <type></type>
Type mismatch. No useful type for merging. Field Schema: <field schema="">. Other Fileld Schema: + otherFs</field>
Type mismatch. Field Schema: <field schema="">. Other Fileld Schema: + otherFs</field>
Unable to create field schema
Found duplicate aliases: <alias></alias>
Found more than one match: st of aliases>
Attempt to fetch field: <field> from schema of size <size></size></field>
Cannot reconcile schemas with different sizes. This schema has size <size> other has size of <size></size></size>
Access to the tuple <alias> of the bag is disallowed. Only access to the elements of the tuple in the bag is allowed.</alias>
One of the schemas is null for merging schemas. Schema: <schema> Other schema: <schema></schema></schema>
Different schema sizes for merging schemas. Schema size: <size> Other schema size: <size></size></size>
Incompatible types for merging schemas. Field schema type: <type> Other field schema type: <type></type></type>
Incompatible inner schemas for merging schemas. Field schema: <schema> Other field schema: <schema></schema></schema>
Schema size mismatch for merging schemas. Other schema size greater than schema size. Schema: <schema>. Other schema: <schema></schema></schema>
TypeCastInserter invoked with an invalid operator class name: <operator class="" name=""></operator>
Error getting LOProject's input schema
Map key should be a basic type
Operand of Regex can be CharArray only
Operands of AND/OR can be boolean only
Incompatible types in <addition division="" greaterthan="" lesserthan="" mod="" multiplication="" subtraction=""></addition> operator. left hand side: <type> right hand size: type</type>
Could not set <add bincond="" divide="" mod="" multiply="" subtract="" userfunc=""> field schema</add>
NEG can be used with numbers or Bytearray only
NOT can be used with boolean only
Unable to retrieve field schema of operator.
Unable to get list of overloaded methods.

1045	Could not infer the matching function for <func spec=""> as multiple or none of them fit. Please use an explicit cast.</func>
1046	Multiple matching functions for <funcspec> with input schemas: (<schema> , <schema>). Please use an explicit cast.</schema></schema></funcspec>
1047	Condition in BinCond must be boolean
1048	Two inputs of BinCond must have compatible schemas
1049	Problem during evaluaton of BinCond output type
1050	Unsupported input type for BinCond: lhs = <type>; rhs = <type></type></type>
1051	Cannot cast to bytearray
1052	Cannot cast <type> with schema <schema> to <type> with schema <schema></schema></type></schema></type>
1053	Cannot resolve load function to use for casting from <type> to <type></type></type>
1054	Cannot merge schemas from inputs of UNION
1055	Problem while reading schemas from inputs of <union cross="" distinct="" limit="" splitoutput=""></union>
1056	Problem while casting inputs of Union
1057	's inner plan can only have one output (leaf)
1058	Split's condition must evaluate to boolean. Found: <type></type>
1059	Problem while reconciling output schema of <sort filter="" split=""></sort>
1060	Cannot resolve <cogroup foreach="" fragment="" join="" replicate=""> output schema</cogroup>
1061	Sorry, group by complex types will be supported soon
1062	COGroup by incompatible types
1063	Problem while reading field schema from input while inserting cast
1064	Problem reading column <col/> from schema: <schema></schema>
1065	Found more than one load function to use: <ist functions="" load="" of=""></ist>
1066	Unable to open iterator for alias <alias></alias>
1067	Unable to explain alias <alias></alias>
1068	Using <map bag=""> as key not supported.</map>
1069	Problem resolving class version numbers for class <class></class>
1070	Could not resolve <class> using imports: <package import="" list=""></package></class>
1071	Cannot convert a <type> to <type></type></type>
1072	Out of bounds access: Request for field number < number> exceeds tuple size of <size></size>
1073	Cannot determine field schema for <object></object>
1074	Problem with formatting. Could not convert <object> to <integer double="" float="" long="">.</integer></object>
1075	Received a bytearray from the UDF. Cannot determine how to convert the bytearray to <int bag="" double="" float="" long="" map="" string="" tuple=""></int>
1076	Problem while reading field schema of cast operator.
1077	Two operators that require a cast in between are not adjacent.
1078	Schema size mismatch for casting. Input schema size: <size>. Target schema size: <size></size></size>
1079	Undefined type checking logic for unary operator: " <operator></operator>
1080	Did not find inputs for operator: " <operator></operator>
1081	Cannot cast to <int bag="" double="" float="" long="" map="" string="" tuple="">. Expected bytearray but received: <type></type></int>
1082	Cogroups with more than 127 inputs not supported.
1083	setBatchOn() must be called first.
1084	Invalid Query: Query is null or of size 0.
1085	operator in <pushbefore pushafter=""> is null. Cannot <pushbefore pushafter=""> null operators.</pushbefore></pushbefore>
1086	First operator in <pushbefore pushafter=""> should have multiple <inputs outputs="">. Found first operator with <size> <inputs outputs="">.</inputs></size></inputs></pushbefore>
1087	The <inputnum outputnum=""> <num> should be lesser than the number of <inputs outputs=""> of the first operator. Found first operator with <size> <inputs outputs="">.</inputs></size></inputs></num></inputnum>
1088	operator in <pushbefore pushafter=""> should have <at least=""> one <output input="">. Found <first second=""> operator with <no <size=""> > <outputs inputs="">.</outputs></no></first></output></at></pushbefore>
1089	Second operator in <pushbefore pushafter=""> should be the <successor predecessor=""> of the First operator.</successor></pushbefore>
1090	Second operator can have at most one <incoming outgoing=""> edge from First operator. Found <num> edges.</num></incoming>
	•

1091	First operator does not support multiple <outputs inputs="">. On completing the <pushbefore pushafter=""> operation First operator will end up with <num> edges</num></pushbefore></outputs>
1092	operator in swap is null. Cannot swap null operators.
1093	Swap supports swap of operators with at most one <input output=""/> . Found <first second=""> operator with <size> <inputs outputs=""></inputs></size></first>
1094	Attempt to insert between two nodes that were not connected.
1095	Attempt to remove and reconnect for node with multiple <pre>redecessors/successors>.</pre>
1096	Attempt to remove and reconnect for node with < <size>/no> <predecessors successors="">.</predecessors></size>
1097	Containing node cannot be null.
1098	Node index cannot be negative.
1099	Node to be replaced cannot be null.
1100	Replacement node cannot be null.
1101	Merge Join must have exactly two inputs. Found : + <size> + inputs</size>
1102	Data is not sorted on <left right=""> side. Last two keys encountered were: <pre><pre><pre><pre>current</pre> key></pre></pre></pre></left>
1103	Merge join only supports Filter, Foreach and Load as its predecessor. Found : <operator></operator>
1104	Right input of merge-join must implement SamplableLoader interface. This loader doesn't implement it.
1105	Heap percentage / Conversion factor cannot be set to 0
1106	Merge join is possible only for simple column or '*' join keys when using <funcspec> as the loader</funcspec>
1107	Try to merge incompatible types (eg. numerical type vs non-numeircal type)
1108	Duplicated schema
1109	Input (<input alias=""/>) on which outer join is desired should have a valid schema
1110	Unsupported query: You have an partition column (<colname>) inside a <regexp bincond="" cast="" check="" function="" null="" operator=""> in the filter condition.</regexp></colname>
1111	Use of partition column/condition with non partition column/condition in filter expression is not supported.
1112	Unsupported query: You have an partition column (<column name="">) in a construction like: (pcond and) or (pcond and) where pcond is a condition on a partition column.</column>
1113	Unable to describe schema for nested expression <alias></alias>
1114	Unable to find schema for nested alias <nested alias=""></nested>
1115	Place holder for Howl related errors
1116	Duplicate udf script (in scripting language)
1117	Cannot merge schema
1118	Cannot convert bytes load from BinStorage
1119	Cannot find LoadCaster class
1120	Cannot cast complex data
1121	Python error
1122	The arity of cogroup/group by columns do not match
1123	Cogroup/Group by * is only allowed if the input has a schema
1124	Mismatch merging expression field schema with user specified schema
1125	Error determining field schema from object in constant expression"
1126	Schema having field with null alias cannot be merged using alias.
1127	Dereference index out of range in schema.
1128	Cannot find field dereference field in schema.
1129	Referring to column(s) within a column of type is not allowed

200 0	Internal error. Mismatch in group by arities. Expected: <schema>. Found: <schema></schema></schema>
200 1	Unable to clone plan before compiling
200 2	The output file(s): <filename> already exists</filename>

200 3	Cannot read from the storage where the output <filename> will be stored</filename>
200 4	Internal error while trying to check if type casts are needed
200 5	Expected <class>, got <class></class></class>
200 6	TypeCastInserter invoked with an invalid operator class name: <class></class>
200 7	Unable to insert type casts into plan
200 8	cannot have more than one input. Found <n> inputs.</n>
200 9	Can not move LOLimit up
201 0	LOFilter should have one input
201 1	Can not insert LOLimit clone
201 2	Can not remove LOLimit after <class></class>
201 3	Moving LOLimit in front of <class> is not implemented</class>
201 4	Unable to optimize load-stream-store optimization
201 5	Invalid physical operators in the physical plan
201 6	Unable to obtain a temporary path.
201 7	Internal error creating job configuration.
201 8	Internal error. Unable to introduce the combiner for optimization.
201 9	Expected to find plan with single leaf. Found <n> leaves.</n>
202 0	Expected to find plan with UDF leaf. Found <class></class>
202 1	Internal error. Unexpected operator project in local rearrange inner plan.
202 2	Both map and reduce phases have been done. This is unexpected while compiling.
202 3	Received a multi input plan when expecting only a single input one.
202 4	Expected reduce to have single leaf. Found <n> leaves.</n>
202 5	Expected leaf of reduce plan to always be POStore. Found <class></class>
202 6	No expression plan found in POSort.
202 7	Both map and reduce phases have been done. This is unexpected for a merge.
202 8	ForEach can only have one successor. Found <n> successors.</n>
202 9	Error rewriting POJoinPackage.
203 0	Expected reduce plan leaf to have a single predecessor. Found <n> predecessors.</n>
203 1	Found map reduce operator with POLocalRearrange as last oper but with no succesor.
203 2	Expected map reduce operator to have a single successor. Found <n> successors.</n>

203 3	Problems in rearranging map reduce operators in plan.
203 4	Error compiling operator <class></class>
203 5	Internal error. Could not compute key type of sort operator.
203 6	Unhandled key type <type></type>
203 7	Invalid ship specification. File doesn't exist: <file></file>
203 8	Unable to rename <oldname> to <newname></newname></oldname>
203 9	Unable to copy <src> to <dst></dst></src>
204 0	Unknown exec type: <type></type>
204 1	No Plan to compile
204 2	Internal error. Unable to translate logical plan to physical plan.
204 3	Unexpected error during execution.
204 4	The type <type> cannot be collected as a Key type</type>
204 5	Internal error. Not able to check if the leaf node is a store operator.
204 6	Unable to create FileInputHandler.
204 7	Internal error. Unable to introduce split operators.
204 8	Error while performing checks to introduce split operators.
204 9	Error while performing checks to optimize limit operator.
205 0	Internal error. Unable to optimize limit operator.
205 1	Did not find a predecessor for <distinct filter="" limit="" negative="" null="" output="" sort="" split="" store="" stream="">.</distinct>
205 2	Internal error. Cannot retrieve operator from null or empty list.
205 3	Internal error. Did not find roots in the physical plan.
205 4	Internal error. Could not convert <object> to <integer bag="" double="" float="" long="" map="" tuple=""></integer></object>
205 5	Did not find exception name to create exception from string: <string></string>
205 6	Cannot create exception from empty string.
205 7	Did not find fully qualified method name to reconstruct stack trace: <line></line>
205 8	Unable to set index on the newly created POLocalRearrange.
205 9	Problem with inserting cast operator for <regular <operator="" binary="" cogroup="" conditional="" defined="" expression="" fragment="" function="" join="" operator="" project="" replicate="" unary="" user="">> in plan.</regular>
206 0	Expected one leaf. Found <n> leaves.</n>
206 1	Expected single group by element but found multiple elements.
206 2	Each COGroup input has to have the same number of inner plans."

206 3	Expected multiple group by element but found single element.
206 4	Unsupported root type in LOForEach: <operator></operator>
206 5	Did not find roots of the inner plan.
206 6	Unsupported (root) operator in inner plan: <operator></operator>
206 7	does not know how to handle type: <type></type>
206 8	Internal error. Improper use of method getColumn() in POProject
206 9	Error during map reduce compilation. Problem in accessing column from project operator.
207 0	Problem in accessing column from project operator.
207 1	Problem with setting up local rearrange's plans.
207 2	Attempt to run a non-algebraic function as an algebraic function
207 3	Problem with replacing distinct operator with distinct built-in function.
207 4	Could not configure distinct's algebraic functions in map reduce plan.
207 5	Could not set algebraic function type.
207 6	Unexpected Project-Distinct pair while trying to set up plans for use with combiner.
207 7	Problem with reconfiguring plan to add distinct built-in function.
207 8	Caught error from UDF: <class> <message from="" udf=""></message></class>
207 9	Unexpected error while printing physical plan.
208 0	Foreach currently does not handle type <type></type>
208 1	Unable to setup the <load store=""> function.</load>
208 2	Did not expect result of type: <type></type>
208 3	Error while trying to get next result in POStream.
208 4	Error while running streaming binary.
208 5	Unexpected problem during optimization. Could not find LocalRearrange in combine plan.
208 6	Unexpected problem during optimization. Could not find all LocalRearrange operators.
208 7	Unexpected problem during optimization. Found index: <index> in multiple LocalRearrange operators.</index>
208 8	Unable to get results for: <file specification=""></file>
208 9	Unable to flag project operator to use single tuple bag.
209 0	Received Error while processing the <combine reduce=""> plan.</combine>
209 1	Packaging error while processing group.
209 2	No input paths specified in job.

209 3	Encountered error in package operator while processing group.
209 4	Unable to deserialize object
209 5	Did not get reduce key type from job configuration.
209 6	Unexpected class in SortPartitioner: <class name=""></class>
209 7	Failed to copy from: <src> to: <dst></dst></src>
209 8	Invalid seek option: <options></options>
209 9	Problem in constructing slices.
210 0	does not exist.
210 1	should not be used for storing.
210 2	"Cannot test a <type> for emptiness.</type>
210 3	Problem while computing <max min="" sum=""> of <doubles floats="" ints="" longs="" strings="">.</doubles></max>
210 4	Error while determining schema of <binstorage data="" input="">.</binstorage>
210 5	Error while converting <int bag="" chararray="" double="" float="" long="" map="" tuple=""> to bytes</int>
210 6	Error while computing <arity concat="" count="" max="" min="" size="" sum=""> in <class name=""></class></arity>
210 7	DIFF expected two inputs but received <n> inputs.</n>
210 8	Could not determine data type of field: <object></object>
210 9	TextLoader does not support conversion <from to=""> <bag double="" float="" integer="" long="" map="" tuple="">.</bag></from>
211 0	Unable to deserialize optimizer rules.
211 1	Unable to create temporary directory: <path></path>
211 2	Unexpected data while reading tuple from binary file.
211 3	SingleTupleBag should never be serialized or serialized.
211 4	Expected input to be chararray, but got <class name=""></class>
211 5	Internal error. Expected to throw exception from the backend. Did not find any exception to throw.
211 6	Unexpected error. Could not check for the existence of the file(s): <filename></filename>
211 7	Unexpected error when launching map reduce job.
211 8	Unable to create input slice for: <filename></filename>
211 9	Internal Error: Found multiple data types for map key
212 0	Internal Error: Unable to determine data type for map key
212 1	Error while calling finish method on UDFs.
212 2	Sum of probabilities should be one

212 3	Internal Error: Unable to discover required fields from the loads
212 4	Internal Error: Unexpected error creating field schema
212 5	Expected at most one predecessor of load
212 6	Predecessor of load should be store
212 7	Cloning of plan failed.
212 8	Failed to connect store with dependent load.
212 9	Internal Error. Unable to add store to the split plan for optimization.
213 0	Internal Error. Unable to merge split plans for optimization.
213 1	Internal Error. Unable to connect split plan for optimization.
213 2	Internal Error. Unable to replace store with split operator for optimization.
213 3	Internal Error. Unable to connect map plan with successors for optimization.
213 4	Internal Error. Unable to connect map plan with predecessors for optimization.
213 5	Received error from store function.
213 6	Internal Error. Unable to set multi-query index for optimization.
213 7	Internal Error. Unable to add demux to the plan as leaf for optimization.
213 8	Internal Error. Unable to connect package to local rearrange operator in pass-through combiner for optimization.
213 9	Invalid value type: <type>. Expected value type is DataBag.</type>
214 0	Invalid package index: <index>. Should be in the range between 0 and <package array="" size="">.</package></index>
214 1	Internal Error. Cannot merge non-combiner with combiners for optimization.
214 2	ReadOnceBag should never be serialized.
214 3	Expected index value within POPackageLite is 0, but found 'index'.
214 4	Problem while fixing project inputs during rewiring.
214 5	Problem while rebuilding schemas after transformation.
214 6	Internal Error. Inconsistency in key index found during optimization.
214 7	Error cloning POLocalRearrange for limit after sort.
214 8	Error cloning POPackageLite for limit after sort
214 9	Internal error while trying to check if filters can be pushed up.
215 0	Internal error. The push before input is not set.
215 1	Internal error while pushing filters up.
215 2	Internal error while trying to check if foreach with flatten can be pushed down.
	ı

215 3	Internal error. The mapping for the flattened columns is empty
215 4	Internal error. Schema of successor cannot be null for pushing down foreach with flatten.
215 5	Internal error while pushing foreach with flatten down.
215 6	Error while fixing projections. Projection map of node to be replaced is null.
215 7	Error while fixing projections. No mapping available in old predecessor to replace column.
215 8	Error during fixing projections. No mapping available in old predecessor for column to be replaced.
215 9	Error during fixing projections. Could not locate replacement column from the old predecessor.
216 0	Error during fixing projections. Projection map of new predecessor is null.
216 1	Error during fixing projections. No mapping available in new predecessor to replace column.
216 2	Error during fixing projections. Could not locate mapping for column <column> in new predecessor.</column>
216 3	Error during fixing projections. Could not locate replacement column for column: <column> in the new predecessor.</column>
216 4	Expected EOP as return status. Found: <returnstatus></returnstatus>
216 5	Problem in index construction.
216 6	Key type mismatch. Found key of type <type> on left side. But, found key of type <type> in index built for right side.</type></type>
216 7	LocalRearrange used to extract keys from tuple isn't configured correctly.
216 8	Expected physical plan with exactly one root and one leaf.
216 9	Physical operator preceding <right left=""> predicate not found in compiled MR jobs.</right>
217 0	Physical operator preceding both left and right predicate found to be same. This is not expected.
217 1	Expected one but found more then one root physical operator in physical plan.
217 2	Expected physical operator at root to be POLoad. Found : <physicaloperator></physicaloperator>
217 3	One of the preceding compiled MR operator is null. This is not expected.
217 4	Internal exception. Could not create the sampler job.
217 5	Internal error. Could not retrieve file size for the sampler.
217 6	Error processing right input during merge join
217 7	Prune column optimization: Cannot retrieve operator from null or empty list
217 8	Prune column optimization: The matching node from the optimizor framework is null
217 9	Prune column optimization: Error while performing checks to prune columns.
218 0	Prune column optimization: Only LOForEach and LOSplit are expected
218 1	Prune column optimization: Unable to prune columns.
218 2	Prune column optimization: Only relational operator can be used in column prune optimization.

218 3	Prune column optimization: LOLoad must be the root logical operator.
218 4	Prune column optimization: Fields list inside RequiredFields is null.
218 5	Prune column optimization: Unable to prune columns.
218 6	Prune column optimization: Cannot locate node from successor
218 7	Column pruner: Cannot get predessors
218 8	Column pruner: Cannot prune columns
218 9	Column pruner: Expect schema
219 0	PruneColumns: Cannot find predecessors for logical operator
219 1	PruneColumns: No input to prune
219 2	PruneColumns: Column to prune does not exist
219 3	PruneColumns: Foreach can only have 1 predecessor
219 4	PruneColumns: Expect schema
219 5	PruneColumns: Fail to visit foreach inner plan
219 6	RelationalOperator: Exception when traversing inner plan
219 7	RelationalOperator: Cannot drop column which require *
219 8	LOLoad: load only take 1 input
219 9	LOLoad: schema mismatch
220 0	PruneColumns: Error getting top level project
220 1	Could not validate schema alias
220 2	Error change distinct/sort to use secondary key optimizer
220 3	Sort on columns from different inputs
220 4	Error setting secondary key plan
220 5	Error visiting POForEach inner plan
220 6	Error visiting POSort inner plan
220 7	POForEach inner plan has more than 1 root
220 8	Exception visiting foreach inner plan
220 9	Internal error while processing any partition filter conditions in the filter after the load
221 0	Internal Error in logical optimizer.
221 1	Column pruner: Unable to prune columns.
221 2	Unable to prune plan.

221 3	Error visiting inner plan for ForEach.
221 4	Cannot find POLocalRearrange to set secondary plan.
221 5	See more than 1 successors in the nested plan.
221 6	Cannot get field schema
221 7	Problem setFieldSchema
221 8	Invalid resource schema: bag schema must have tuple as its field
221 9	Attempt to disconnect operators which are not connected
222 0	Plan in inconssistent state, connected in fromEdges but not toEdges
222 1	No more walkers to pop
222 2	Expected LogicalExpressionVisitor to visit expression node
222 3	Expected LogicalPlanVisitor to visit relational node
222 4	Found LogicalExpressionPlan with more than one root
222 5	Projection with nothing to reference
222 6	Cannot fine reference for ProjectExpression
222 7	LogicalExpressionVisitor expects to visit expression plans
222 8	Could not find a related project Expression for Dereference
222 9	Couldn't find matching uid for project expression
223 0	Cannot get column from project
223 1	Unable to set index on newly create POLocalRearrange
223 2	Cannot get schema
223 3	Cannot get predecessor
223 4	Cannot get group key schema
223 5	Expected an ArrayList of Expression Plans
223 6	User defined load function should implement the LoadFunc interface
223 7	Unsupported operator in inner plan
223 8	Expected list of expression plans
223 9	Structure of schema change
224 0	LogicalPlanVisitor can only visit logical plan
224 1	UID is not found in the schema
224 2	TypeCastInserter invoked with an invalid operator

224 3	Attempt to remove operator that is still connected to other operators
224 4	Hadoop does not return any error message
224 5	Cannot get schema from loadFunc
224 6	Error merging schema
224 7	Cannot determine skewed join schema
224 8	twoLevelAccessRequired==true is not supported with" +"and isSubNameMatch==true.
224 9	While using 'collected' on group; data must be loaded via loader implementing CollectableLoadFunc.
225 0	Blocking operators are not allowed before Collected Group. Consider dropping using 'collected'.
225 1	Merge Cogroup work on two or more relations. To use map-side group-by on single relation, use 'collected' qualifier.
225 2	Base loader in Cogroup must implement CollectableLoadFunc.
225 3	Side loaders in cogroup must implement IndexableLoadFunc.
225 4	Currently merged cogroup is not supported after blocking operators.
225 5	POSkewedJoin operator has " + compiledInputs.length + " inputs. It should have 2.
225 6	Cannot remove and reconnect node with multiple inputs/outputs
225 7	An unexpected exception caused the validation to stop
225 8	Bug:Two different load functions mapped to an LOCast op
225 9	Cannot instantiate class
2260	in split only one of input/output schema is null
2261	input and output schema size of split differ
2262	uid mapped to two different load functions
2263	expected only one predecessor
2264	more than one project star as leaf in plan
2265	Schema not expected for project-star
2266	Expected single LOGenerate output in innerplan of foreach
2267	reset on schema at pos greater than schema size
2268	More than one input found for scalar expression
2269	No input found for scalar expression
299	Encountered IOException.

299 7	Encountered IOException.
299 8	Unexpected internal error.
299 9	Unhandled internal error.
300 0	IOException caught while compiling POMergeJoin
