

Not able to embedd OLE objects on windows 7 platform

We observed this issue that OpenOffice 3.3 is not able to embed OLE onjects on Wondows 7 platform. It displays and error called "create pakage". Once we give path of the document in the create pakage dialog box it again opens up the same box when trying to open the object.

We have many expectations with OpenOffice 3.4 but sadly when tested on 3.4 the same results were reflected. Anybody out there faced similar kind of issue? Any workaround or solution for this issue?
