

# UpdateAndPrefetch

## what is up

Update & Prefetch codes in the core system, but using some same codes and working in the transform layer. we put here for altogether for future enhancement.

### Update:

named full as Scheduled Update, which is a crontab like spider for content revalidates.

### Prefetch:

works as a robot that prefetch your html elements before your browser request it. Prefetch have another API Hooking system for some more control of the job.

## Update problems & roadmap

TBD

## Prefetch problems & roadmap
