    Jay Zarfoss

...if vote was successful..
I will promote the artifacts to the central repo.
```

Release Announcement Email Example

To: announce@apache.org, user@curator.apache.org, dev@curator.apache.org, user@zookeeper.apache.org
Subject: [ANNOUNCE] Apache Curator x.y.z released

Hello,

The Apache Curator team is pleased to announce the release of version x.y.z. Apache Curator is a Java/JVM client library for Apache ZooKeeper[1], a distributed coordination service. Apache Curator includes a high-level API framework and utilities to make using Apache ZooKeeper much easier and more reliable. It also includes recipes for common use cases and extensions such as service discovery and a Java 8 asynchronous DSL. For more details, please visit the project website: <https://curator.apache.org/>

The download page for Apache Curator is here:
<https://curator.apache.org/releases.html>

The binary artifacts for Curator are available from Maven Central and its mirrors.

For general information on Apache Curator, please visit the project website:
<https://curator.apache.org>
