

Home

Apache ServiceMix is a flexible, open-source integration container that unifies the features and functionality of Apache [ActiveMQ](#), [Camel](#), [CXF](#), [ODE](#), [Karaf](#) into a powerful runtime platform you can use to build your own integrations solutions. It provides a complete, enterprise ready ESB exclusively powered by OSGi.

It is being released under Apache License.

The main features are:

- reliable messaging with [Apache ActiveMQ](#)
- messaging, routing and Enterprise Integration Patterns with [Apache Camel](#)
- WS-* and RESTful web services with [Apache CXF](#)
- loosely coupled integration between all the other components with Apache ServiceMix NMR including rich Event, Messaging and Audit API
- complete WS-BPEL engine with [Apache ODE](#)
- OSGi-based server runtime powered by [Apache Karaf](#)
