

# Setup Tomcat

## Table of contents

- [Installation](#)
- [Configuration](#)

Homepage :	<a href="http://tomcat.apache.org/">http://tomcat.apache.org/</a>
Download:	<a href="http://tomcat.apache.org/download-60.cgi">http://tomcat.apache.org/download-60.cgi</a>
File(s):	apache-tomcat-6.0.20.tar.gz (5.7 MB)

For developing Wicket-webapplications a runtime server is necessary. The easiest setup uses the embedded (in an extra JAR-file) Jetty server. But you also can use Apache Tomcat, which may be more familiar for some developers.

## Installation

Linux:

- Unzip tar.gz-package

### Terminal

```
$ cd ~
$ tar xvfz DOWNLOADS/apache-tomcat-6.0.20.tar.gz
```

- New folder is "~/apache-tomcat-6.0.20"

## Configuration

- Add "CATALINA\_HOME" environment variable

Ubuntu:

### Terminal

```
$ nano ~/.bashrc
...
export CATALINA_HOME="/home/ralf/apache-tomcat-6.0.20"
$ source ~/.bashrc
$ echo $CATALINA_HOME
~/apache-tomcat-6.0.20
```
