

How do I render a single radio button

Using OGNL, it is possible to render a single radio button using the existing radio tag.

```
<s:radio theme="simple" name="selectedOption" list="{optionA}"/>
...
<s:radio theme="simple" name="selectedOption" list="{optionB}"/>
```

If you want to use some other (or no) label, you can use a map:

```
<s:radio theme="simple" name="selectedOption" list="#{optionA:'Value A'}/>
...
<s:radio theme="simple" name="selectedOption" list="#{optionB:'Value B'}/>
```
