

autocompleter

To use this tag:

- Add: `<%@ taglib prefix="sx" uri="/struts-dojo-tags" %>` to your page.
- The `head` tag must be included on the page, which can be configured for performance or debugging purposes.
- If the `parseContent` parameter for the `head` tag is false (it is false by default), then the `id` tag is required.

Additional Examples

For more examples see [Ajax and JavaScript Recipes](#)

Description

Error formatting macro: snippet: java.lang.NullPointerException

Parameters

Error formatting macro: snippet: java.lang.NullPointerException

Examples

Get list from an action:

Error formatting macro: snippet: java.lang.NullPointerException

Uses a list:

Error formatting macro: snippet: java.lang.NullPointerException

Autocompleter that reloads its content everytime the text changes (and the length of the text is greater than 3):

Error formatting macro: snippet: java.lang.NullPointerException

Linking two autocompleters:

Error formatting macro: snippet: java.lang.NullPointerException

Set/Get selected values using JavaScript:

Error formatting macro: snippet: java.lang.NullPointerException

Using `beforeNotifyTopics`:

Error formatting macro: snippet: java.lang.NullPointerException

Using `errorNotifyTopics`:

Error formatting macro: snippet: java.lang.NullPointerException

Using `errorNotifyTopics`:

Error formatting macro: snippet: java.lang.NullPointerException

Using `valueNotifyTopics`:

Error formatting macro: snippet: java.lang.NullPointerException

Caveats

- The service that is producing the HTTP Response with JSON response to the Autocompleter tag must set the HTTP Header Response Content-Type to `text/json`. JSON has its own MIME type, which this tag expects.
- Since 2.0.9, there is a change in the value:key order. Now, the value **must** come before the key.
