

# JSP Examples

## JSP Examples

### Part 1 - Installing/Running JSP Examples

#### Overview

The JSP examples are provided by the Apache Tomcat project. It is a collection of samples demonstrating the usage of different parts of the Java Server Pages (JSP) specification. Both JSP 2.0 and JSP 1.2 examples are included.

- Expression Language
- SimpleTag Handlers and JSP Fragments
- Tag Files
- JSP XML Syntax (.jspx)
- A bunch more

#### Installing JSP Examples

No need to install these examples as they come predeployed within the Geronimo server.

However, you can click the **"attachment tab"** above to download the application and deployment plans for Geronimo v1. Note that the attached deployment plans specify a different context-root to avoid conflict with the predeployed application.

#### Running the Examples

- Start the Geronimo server (geronimo/bin/startup.bin|sh)
- Access the Geronimo Welcome page (<http://localhost:8080>)
- Under the Geronimo Examples section.. Choose JSP Examples (Or you can access the examples directly at <http://localhost:8080/jsp-examples/>)
- Each servlet example can be executed or the source can be viewed

#### Uninstalling the Examples

JSP Examples can be easily removed by using the "Uninstall application" function of the Geronimo web console. The console is available at <http://localhost:8080/console>

**Contact Info:** If you have additional questions, please append to the Geronimo user mailing list: <http://geronimo.apache.org/mailling.html>
