

April 2015

DESCRIPTION

Apache Shindig is an Opensocial Reference implementation in wide use by both social networks and enterprise software. Shindig graduated from the Incubator in January 2010.

ISSUES

The Shindig PMC has no issues that require board attention.

COMMUNITY

The Shindig community has saw a noticeable decline in mailing list activity as well as contributions to the code base over the past few months. Some of this might have to do with the OpenSocial Foundation being dissolved and portions of the OpenSocial specification being taken over by the W3C (<http://www.w3.org/2014/12/opensocial.html.en>). The Shindig community has not seen any contributions due to specification changes coming from the W3C since the move has taken place.

COMMITTER/PMC CHANGES

No PMC member changes.

RELEASES

Apache Shindig 2.5.2 was released the 2014-10-26. The community is currently working towards a 2.5.3 release.
