Report 1

Project Name	Spark Backend Support for Gora (GORA-386)
Project URL	➕ **GORA-386** - Gora Spark Backend Support `RESOLVED`
Report #	1
Report compiled by	Furkan KAMACI
Report date	25 May 2015

Project Description

Apache Gora open source framework provides an in-memory data model and persistence for big data. Gora supports persisting to column stores, key value stores, document stores and RDBMSs, and analyzing the data with extensive Apache Hadoop MapReduce support.
Even Spark is so powerful compared to Map/Reduce which Gora currently supports; there is no Spark backend for Gora. This proposal aims to develop a solution for Gora to support Spark.

Checklist

Apache Gora documentation is read.

Apache Gora source code is analyzed.

Related projects are analyzed.

An issue from Apache Gora JIRA picked up and fixed (⬆ **GORA-262** - Add support for HTTPClient authentication in gora-solr `RESOLVED`)

Next Steps

Check Spark documentation.

Analyze the problem.
