

Data Model Diagrams

These diagrams were created from the OFBiz data model and seed data. The tools used include the eomodeld export functionality in the OFBiz WebTools webapp, and then the OmniGraffle application to create the diagrams based on those models.

The diagrams attached to this page are all PDF files. There is a table of contents page, and the diagram pages are split into 4 files. These documents are designed to be printed on 11x17" paper (basically two 8.5x11 pages put together).

Special thanks to Hotwax Media for contributing these excellent documents. They were produced by David E. Jones, Laurian Escalante and John Maw.

The Big Book of Apache OFBiz Data Model Released in 2017

Key changes:

- Colored content with titles according to the internal color pattern.
- Added a separate page for integration specific entities.
- Removed technical process diagrams, making it specific for entities.
- Added 77 new entities.
- Removed of 8 entities.
- Added around 200+ new fields in entities (Though major portion includes the addition of description or attrDescription fields in *Attribute or *TypeAttr entities).
- Removed 24 fields.

Following are the original data model source files:
