Spring Event

Spring Event Component

The **spring-event:** component provides access to the Spring `ApplicationEvent` objects. This allows you to publish `ApplicationEvent` objects to a Spring `ApplicationContext` or to consume them. You can then use Enterprise Integration Patterns to process them such as Message Filter.

URI format

```
spring-event://default[?options]
```

Note, at the moment there are no options for this component. That can easily change in future releases, so please check back.
