

How to update AdminLTE for admin console

Version warning

Content of this page applies to Apache Syncope >= 2.0.0

Starting with 2.0.0, the admin console look & feel is based on [Admin LTE](#), whose sources (mainly CSS and JavaScript files) are copied over the Syncope source tree, under the `client/console` module.

Clone the Admin LTE repository and switch to the most recent tag

```
$ git clone https://github.com/almasaeed2010/AdminLTE/ adminlte  
$ git checkout v2.3.3
```

Clone the Syncope repository

```
$ git clone https://git-wip-us.apache.org/repos/asf/syncope.git
```

Update

Assuming that `$AdminLTE_repo` is the directory containing the Admin LTE sources and `$Syncope_repo` is the directory containing the Syncope sources,

```
$ cd $AdminLTE_repo  
$ cp dist/js/app.min.js $Syncope_repo/client/console/src/main/resources/org/apache/syncope/client/console/themes/  
/js/AdminLTE-app.min.js  
$ cp dist/css/AdminLTE.css $Syncope_repo/client/console/src/main/resources/org/apache/syncope/client/console/  
/themes/css/AdminLTE.css  
$ cp dist/css/skins/* $Syncope_repo/client/console/src/main/resources/META-INF/resources/css/AdminLTE_skins/  
$ rm $Syncope_repo/client/console/src/main/resources/META-INF/resources/css/AdminLTE_skins/*min*  
$ cp plugins/datatables/dataTables.bootstrap.css $Syncope_repo/client/console/src/main/resources/META-INF/  
/resources/css/AdminLTE_plugins/dataTables/
```

Review

[Build](#) everything **without** skipping tests, then launch either in Debug or JRebel mode to check that everything is still working as expected, and looks nice.

If not, strive to fix.

Commit

...and commit the changes.
