Board Report, Oltu PMC

Oltu PMC Chair: Antonio Sanso ([asanso@apache.org](mailto:asanso@apache.org))

Date: May 2016

## DESCRIPTION

Oltu is a project to develop a Java library which provides an API specification for, and an unconditionally compliant implementation of the OAuth v2.0 specifications.

OAuth is a mechanism that allows users to authenticate and authorise access by another party to resources they control while avoiding the need to share their username and password credentials.

## MILESTONES

Apache Oltu 1.0 was released on March 3rd 2014.

Apache Oltu Oauth2 module version 1.0.1 was released September 24th 2015.

A vote is currently undergoing in order to release Oauth2 module version 1.0.2

## CURRENT ACTIVITY

The core part of the project related to 'The OAuth 2.0 Authorization Framework' (RFC 6749) is pretty stable due the fact RFC 6749 is now a standard. A stable version 1.0 was released on March 3rd 2014 and some minor releases are going out regularly for bug fixing. A vote is currently undergoing in order to release OAuth2 module version 1.0.2 . At the moment we are working on JSON Web Encryption support (

 **OLTU-80** - Implement JWE support for JWT IN PROGRESS ).

Users activity is growing slowly but steadily (the user@ mailing list has got new messages from new users). We have got quite some feedbacks from users (included patches). Lately we have been fixing a bunch of users reported issues (<https://issues.apache.org/jira/secure/ReleaseNote.jspa?projectId=12314420&version=12334954>) hence the new upcoming release.

## COMMUNITY

PMC composition has not changed since graduation

We have voted one new committer Jasha Joachimstha in January 2015 (31/01/2015)

Tommaso Teofili decided to go emeritus.

## ISSUES

There are no issues requiring board attention at this time.
