

Tips for UI labels translation

Translation of UI labels, error messages, entities labels, etc. (all labels in **lab.xml** files)

- Install your preferred IDE
- Install an XML editor if needed
- Install a Git plugin if needed
- Link to the repositories (framework and plugins)
- Make a project from this repository in your IDE

At this point you should be able to do any translation with ease. There should be only one instance of a label in all translation files and labels should be, as much as possible, prefixed by the application name.

Translating other stuffs (can be extended from the link below...)

If you are looking for how to translate Products or Categories Name and Descriptions, have a look at [How to localize Product and Categories descriptions](#)

Label Manager

To initialize the Label Manager in Webtools, before using "All files" option, 1st select a file and make a search. Then you will be able to select your language and all other options. This should be fixed one day...

Internationalisation (I18n) Localisation (L10n) of OFBiz

[Guide to OFBiz-i18n, Internationalisation of OFBiz](#)

Deprecated

~~[Some POS](#) labels are handled by XUI not OFBiz. You can use a plugin like [RBE](#) to edit those XuiLabels properties~~
