

# S2-045

## Summary

Possible Remote Code Execution when performing file upload based on Jakarta Multipart parser.

<b>Who should read this</b>	All Struts 2 developers and users
<b>Impact of vulnerability</b>	Possible RCE when performing file upload based on Jakarta Multipart parser
<b>Maximum security rating</b>	Critical
<b>Recommendation</b>	Upgrade to <a href="#">Struts 2.3.32</a> or <a href="#">Struts 2.5.10.1</a>
<b>Affected Software</b>	Struts 2.3.5 - Struts 2.3.31, Struts 2.5 - Struts 2.5.10
<b>Reporter</b>	Nike Zheng <nike dot zheng at dbappsecurity dot com dot cn>
<b>CVE Identifier</b>	CVE-2017-5638

## Problem

It is possible to perform a RCE attack with a malicious Content-Type value. If the Content-Type value isn't valid an exception is thrown which is then used to display an error message to a user.

## Solution

If you are using Jakarta based file upload Multipart parser, upgrade to Apache Struts version 2.3.32 or 2.5.10.1. You can also switch to a different [implementation](#) of the Multipart parser.

## Backward compatibility

No backward incompatibility issues are expected.

## Workaround

Implement a Servlet filter which will validate Content-Type and throw away request with suspicious values not matching multipart/form-data.

Other option is to remove the [File Upload Interceptor](#) from the stack, just define your own custom stack and set it as a default - please read [How do we configure an Interceptor to be used with every Action](#). This will work only for Struts 2.5.8 - 2.5.10.

```
<interceptors>
    <interceptor-stack name="defaultWithoutUpload">
        <interceptor-ref name="exception"/>
        <interceptor-ref name="alias"/>
        <interceptor-ref name="servletConfig"/>
        <interceptor-ref name="i18n"/>
        <interceptor-ref name="prepare"/>
        <interceptor-ref name="chain"/>
        <interceptor-ref name="scopedModelDriven"/>
        <interceptor-ref name="modelDriven"/>
        <interceptor-ref name="checkbox"/>
        <interceptor-ref name="datetime"/>
        <interceptor-ref name="multiselect"/>
        <interceptor-ref name="staticParams"/>
        <interceptor-ref name="actionMappingParams"/>
        <interceptor-ref name="params"/>
        <interceptor-ref name="conversionError"/>
        <interceptor-ref name="validation">
            <param name="excludeMethods">input,back,cancel,browse</param>
        </interceptor-ref>
        <interceptor-ref name="workflow">
            <param name="excludeMethods">input,back,cancel,browse</param>
        </interceptor-ref>
        <interceptor-ref name="debugging"/>
    </interceptor-stack>
</interceptors>
<default-interceptor-ref name="defaultWithoutUpload"/>
```
