

Building and deploying the docs [ARCHIVED]

The Airflow documentation is located at:

- <https://airflow.apache.org> (latest stable)
- <https://airflow.readthedocs.io/en/latest/> (latest master)

The documentation for release versions 1.9 can be accessed from the above links as well (e.g., 1.9.0 is <https://airflow.readthedocs.io/en/1.9.0/>).

Docs hosted on ASF

It's a static site that is sourced from ``https://github.com/apache/airflow-site.git`` on the ``asf-site`` branch.

Make sure to install all Airflow python dependencies by running the following before building the docs:

```
pip install apache-airflow[all]
```

To build the docs, run ``python setup.py build_sphinx`` from the main airflow project, this builds a static site under ``docs/_build/html/``. You can then copy the content of this folder to root of the repo/branch mentioned above. Alternatively, you can ``cd docs; ./build.sh``

The website doesn't have a ``master`` branch, just `asf-site`. You'll need to:

```
git clone https://github.com/apache/airflow-site.git
git checkout asf-site
```

Also create a new folder with the name of the version and copy paste all contents there as well. So that you can access it using for example <https://airflow.apache.org/1.10.2/> as well as <https://airflow.apache.org>

Read the Docs

The Read the Docs documentation site is [automatically built](#) via a GitHub webhook.

Local

To build the docs locally, follow the instructions in [Contributing > Documentation](#) which builds a static site under `docs/_build/html`.

Dependencies

The list of Python packages required to build the docs can be found under the ``doc`` extra in [setup.py](#).
