

What's New in v7.1.x

These are the highlights of new features or additions to existing features in 7.1.0. For the complete list of all changes see this [Github PR list](#).

- [Overview](#)
- [New Features](#)
- [Future Deprecated Features](#)
- [New Configuration Options](#)
- [New Metrics](#)
- [New Promoted \(stable\) Plugins](#)
- [New Plugins \(in experimental\)](#)
- [New build \(configure\) options](#)

Overview

- [ATS 7.1.0 Release Notes](#)
 - 262 PRs closed
 - [PRs cherry-picked to 7.1.x from master branch](#) (query : "is:pr is:merged base:master milestone:7.1.0 merged:>2017-01-09")

New Features

- The gzip plugin now supports compression using the [Brotli algorithm](#).
- Remap configuration reloads are now done on the task thread pool, instead of potentially blocking a worker thread.
- We should now properly build with OpenSSL v1.1 and LibreSSL.
- Multiple client certificates can be configured and used.
- The new test framework, based on [autest](#), is now part of the main distribution. The CI runs this on every Github PR as well.

Future Deprecated Features

- A couple of header_rewrite operators are marked as deprecated now, and will be removed in 8.0.0. This includes

New Configuration Options

- [proxy.config.cop.active_health_checks](#)
-

New Metrics

- A slew of parent related metrics were added, they are all prefixed [proxy.process.http.total_paren](#).

New Promoted (stable) Plugins

- None

New Plugins (in experimental)

- money_trace

New build (configure) options

- --enable-mime-sanity-check
- --enable-system-luajit
- --enable-asan
- --enable-tsan
