

Framework Introduction Videos and Diagrams

Framework Introduction Videos and Diagrams

These videos are QuickTime movies and use the new H.264 encoding. This provides great compression while maintaining good quality. **To view these videos you will need QuickTime 7 or later.** These movies are 1024x768 (8fps), and are recorded directly from the screen so the text should be consistently readable. The video streams (H264) vary from ~150kbps to ~500kbps and the audio (AAC) runs at ~32kbps.

These files can be streamed, but chances are you will want to view them over time or multiple times, so please save them as a local file rather than viewing the stream. An alternative is to use **Vimeo (preferred)** or YouTube, see links at the bottom.

These videos cover an overview of the framework. For complete coverage of the Apache OFBiz framework take a look at the continuation of these videos in the Advanced Framework Package from HotWax Media. This includes 23.5 additional hours of video, a complete copy of the quick reference book, and a complete transcription of both the Framework Introduction and the Advanced Framework videos. The transcription is great for taking notes, reading along, and quick reference over time.
