

# Ignite Enhancement Proposal

- [Overview](#)
- [The Process](#)
  - [Discuss](#)
  - [Create IEP](#)
  - [Implement](#)

## Overview

Ignite Enhancement Proposal (IEP) is the process of discussion and management of major product changes. The process is aimed to improve visibility of a high-level product roadmap, increase community engagement and make sure that proposals are treated by community with adequate priority.

Any community member can initiate technical discussion on the devlist and propose the change. If community agrees that the change is large or complex enough, a new **IEP** with unique number could be created for it. Upon creation IEP is assigned with a **sponsor** who will help contributors and implementors drive the process.

## The Process

### Discuss

Initial proposal should be posted to the dev list.

Community then discusses and analyzes the proposal.

### Create IEP

### Implement
