

# Sample projects review and move to attic - October 2017

With the move to Git it's helpful to carry over as few unneeded projects as possible. Our samples should be useful examples for users and obviously build successfully.

The table below presents proposals for moving some sample projects to the attic before the migration takes place.

Module	Who's for moving to the attic?	Who's against moving to the attic?	Comments
accessmanager-ui	<a href="#">Robert Munteanu</a> <a href="#">Stefan Seifert</a>		UI no longer useful as composum fills that role nicely
custom-selector-login-form	<a href="#">Robert Munteanu</a> <a href="#">Stefan Seifert</a>		Uses <code>org.apache.sling.auth.selector</code> bundle, which is in the attic
urifilter	<a href="#">Robert Munteanu</a> <a href="#">Stefan Seifert</a>		We either use JCR security or <code>org.apache.sling.resourceaccesssecurity</code>
usermanager-ui	<a href="#">Robert Munteanu</a> <a href="#">Stefan Seifert</a>		UI no longer useful as composum fills that role nicely
webloader	<a href="#">Robert Munteanu</a> <a href="#">Stefan Seifert</a>		Does not work as no documents are retrieved. Also needs loginAdmin whitelist
