

Sample projects review and move to attic - October 2017

With the move to Git it's helpful to carry over as few unneeded projects as possible. Our samples should be useful examples for users and obviously build successfully.

The table below presents proposals for moving some sample projects to the attic before the migration takes place.

Module	Who's for moving to the attic?	Who's against moving to the attic?	Comments
accessmanager-ui	Robert Munteanu Stefan Seifert		UI no longer useful as composum fills that role nicely
custom-selector-login-form	Robert Munteanu Stefan Seifert		Uses <code>org.apache.sling.auth.selector</code> bundle, which is in the attic
urifilter	Robert Munteanu Stefan Seifert		We either use JCR security or <code>org.apache.sling.resourceaccesssecurity</code>
usermanager-ui	Robert Munteanu Stefan Seifert		UI no longer useful as composum fills that role nicely
webloader	Robert Munteanu Stefan Seifert		Does not work as no documents are retrieved. Also needs loginAdmin whitelist
