NetBeans IDE 8.2 & JDK 8 Update 161 bundle test report

Deadline: 14th of January, 2018

Builds to test:

- Linux (32b installer, 64b installer)
- Mac OS X (64b installer)
- Windows (32b installer, 64b installer)
- Note: If download refuses to start and complains about not accepted license, go to JDK 8u151 with NetBeans 8.2 page, accept license there and then download should work.

Issues:

- report new bug - please choose *NETBEANS* project and *platform - JDK Problems* component
- already reported JDK specific bugs

What to test

1. Install JDK and NetBeans with all 31 updates using downloaded installer.
2. Run IDE with bundled JDK and in **Help > About** dialog make sure you are using *#201609300101* NetBeans build patched with Patch 2 and *1.8.0 _161-b12* Java runtime.
3. If needed upgrade to distribution you need (PHP, Java EE, ...)
4. Create a new project from the area you are responsible for or open some of your already existing projects.
5. Compile and run the project.
6. Make sure you can use the IDE normally and that you spot no regressions.
7. Uninstall NetBeans.

Test coverage
