

Better filter strategy

These are the desired processes:

Standalone

Initialization

PrepareAndExecuteStrutsFilter
init logging
create dispatcher
static resource loader init

Request handling

PrepareAndExecuteStrutsFilter
create action context
set dispatcher instance on thread
set encoding
wrap request
find action mapping
execute static resource request (no mapping)
execute action (mapping)
cleanup thread locals

Two filters

Initialization

PrepareStrutsFilter	ExecuteStrutsFilter
init logging	static resource loader init
create dispatcher	

Request handling

PrepareStrutsFilter	ExecuteStrutsFilter
create action context	
set dispatcher instance on thread	
set encoding	
wrap request	
find action mapping	
	execute static resource request (no mapping)
	execute action (mapping)
cleanup thread locals
