

# Stateful Container

## Configuring

In the the config.xml, find the "EJBNetworkService" gbean and add this gbean next to it:

### config.xml

```
<gbean name="DefaultStatefulContainer">
  <attribute name="properties">
    Timeout=20
    PoolSize=1000
    BulkPassivate=100
  </attribute>
</gbean>
```

## Properties

Each property is as follows:

Property Name	Description
Timeout	Specifies the time to wait between invocations. This value is measured in minutes. A value of 5 would result in a time-out of 5 minutes between invocations. A value of zero would mean no timeout.  Default value is 20.
PoolSize	Specifies the size of the bean pools for this stateful SessionBean container.  Default value is 1000.
BulkPassivate	Property name that specifies the number of instances to passivate at one time when doing bulk passivation.  Default value is 100.
